## **Proposal 1: Urban Brew Coffee Website**

### **1. Organization Overview**

Founded in 2019, Urban Brew Coffee is a stand-alone coffee store. It focuses on providing high-quality coffee items while establishing a calm and friendly atmosphere for clients. Through social media marketing and word-of-mouth, the company has steadily expanded (Kotler et al., 2020).

Our mission is to provide outstanding service and superior coffee.

Vision: To become the area's top coffee destination.

Students, young professionals, and remote workers between the ages of 18 and 40 are the target audience.

### **2. Website Goals and Objectives**

The primary goal of the Urban Brew Coffee website is to establish a strong online presence for the business and improve customer engagement. The website aims to increase brand awareness by promoting the coffee shop's products, services, promotions, and company values to a wider audience.

Another important objective is to provide customers with an easy and convenient online ordering experience. Customers should be able to browse the menu, view pricing, and place orders online without difficulty. The website will also improve communication between the business and customers through contact forms and social media integration.

The website additionally aims to improve customer satisfaction by providing a responsive and user-friendly design that functions well on desktops, tablets, and mobile devices. The business hopes to increase sales, attract new customers, and retain existing customers through an attractive and informative online platform.

Key Performance Indicators (KPIs) that will be used to measure success include increased website traffic, higher online order volumes, customer engagement on the website, and improved social media interaction. (Ryan, 2021).

### 3. Current Website Analysis

The company now uses social media and doesn't have a proper website. This restricts professionalism and accessibility

Creating a responsive website with ordering features is one improvement

### 4. Features and Functionality

A homepage, menu page, contact page, about us page, gallery page, and online ordering system will all be part of the website. Promotions are extra features.

### 5. Design and UX

Warm colors like cream and brown will be used in the design to represent the company identity. The design will be straightforward, tidy, and easy to use. The navigation will be responsive to mobile devices and easy to use.

### 6. Wireframe

|                     |
|---------------------|
| Header (Logo + Nav) |
| Hero Banner         |
| Featured Products   |
| About Section       |
| Footer              |

## 7. Technical Requirements

HTML, CSS will be used in the construction of the website.

## 8. Timeline

### Week 1:

Conduct research on similar coffee shop websites, gather business requirements, and create initial wireframes and design ideas.

### Week 2:

Plan the website structure, create the sitemap, organize content, and prepare images and branding materials for the website.

### Week 3:

Develop the HTML structure for all web pages including the homepage, menu page, gallery page, about us page, online ordering page, and contact page.

### Week 4:

Apply CSS styling to improve the visual appearance of the website, including typography, colors, layout design, navigation menus, and responsiveness.

### Week 5:

Test the website on different devices and screen sizes to ensure responsiveness and usability. Fix bugs, broken links, and layout issues.

### Week 6:

Finalize the website, upload all files to GitHub, deploy the website online, and prepare documentation including the README file and changelog.

## 9. Budget

The estimated budget for the Urban Brew Coffee website project includes development, hosting, maintenance, and future improvements.

### Website Development:

The estimated development cost is approximately R5,000. This includes planning, designing, coding, testing, and implementing the website.

### Domain and Hosting:

Website hosting is estimated at R1,200 per year, while domain registration is estimated at approximately R250 per year.

**Maintenance:**

Monthly maintenance costs are estimated at R500 per month. This includes updating website content, fixing technical issues, updating images and promotions, and maintaining website security.

**Marketing and Advertising:**

An estimated R1,000 may be allocated towards digital marketing and social media promotions to increase traffic to the website after launch.

**Contingency Costs:**

An additional R500 is reserved for unexpected costs such as software tools, image editing resources, or additional website features.

The total estimated first-year cost for the website project is approximately R13,950.
